

## Goal

Create an app that implements a multi-step flow. The goal of this flow is to complete a payment to a Recipient.

1. The user picks from a list of pre-existing recipients:

**Pay Your bills**

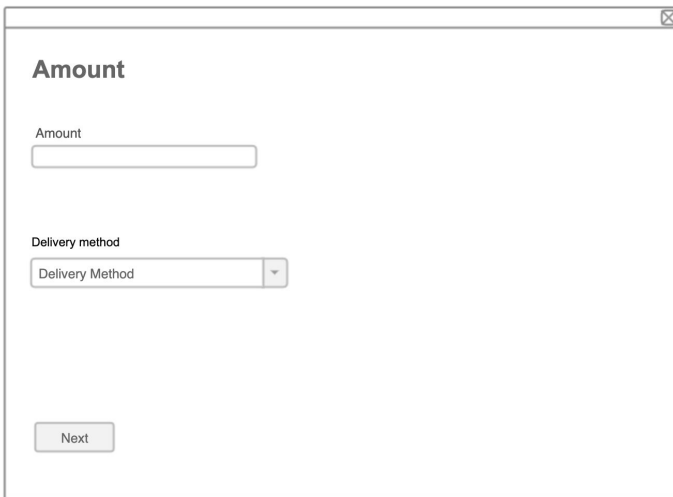

- ☐ **Bank of America**
- ☐ **PG&E Electricity Bill**
- ☐ **AT&T Cellphone**

Next

### Screen 1

- a. Recipient list
- b. Next button

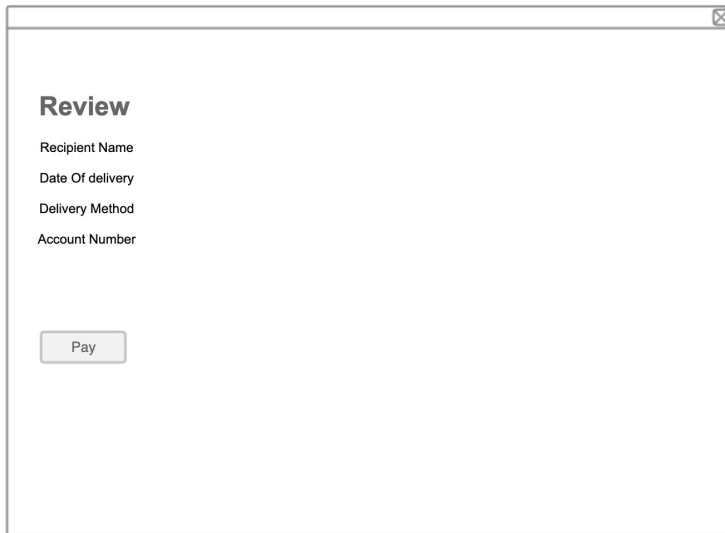

2. On the next screen, the user will enter the payment amount information as well as select the type of funding method they would like to use for this transaction.

The screenshot shows a web form titled "Amount" in a window. The form contains two input fields: a text input labeled "Amount" and a dropdown menu labeled "Delivery method" with "Delivery Method" selected. A "Next" button is located at the bottom left of the form.

#### Screen 2

- a. Amount text input
  - b. Delivery Method
    - i. Drop down with two choices: Check, ACH
    - ii. Next button
- 
3. The final view before that is a review screen that details all information the user entered previously

A mockup of a 'Review' screen within a window. The window has a standard title bar with a close button in the top right corner. The screen content is as follows:

- Review** (Section Header)
- Recipient Name
- Date Of delivery
- Delivery Method
- Account Number
- Pay** (Button)

- Screen 3
  - Review information
  - Pay button
